The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 9-16, 18, 19, and 23-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Frölich et al.

Figure 18 of Frölich along with its disclosure anticipates all the structural elements recited in the above claims.

Claims 5-8, 17, and 20-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Applicant's arguments filed March 20, 2006 have been fully considered but they are not persuasive. Applicant states "While Figure 18 discloses a multilayered element with 'corrugated layers with their webs 16 to 19 and 66 to 69... at right angles,' Frölich discusses the use of this element for universal alignment purposes". This use does not distinguish over the claim language. Applicant further states: "Frölich fails to disclose an element capable of biaxial motion between two substrates." However, right angle orientation shown in Figure 18 does permit biaxial motion. The "connection with other elements" anticipates the biaxial movement between two elements or substrates as claimed. Applicant's statement that "at most Frölich

contemplates a surface that can move in a longitudinal direction, i.e., along one axis as shown in Figure 19” is incorrect, as Frölich contemplates much more than that. Figure 19 does illustrate the movement along an axis; Figure 18 shows an arrangement of layers offset at right angles, which certainly contemplates movement along both axes. Applicant’s assertion that “A cardboard box with multilayered elements as provided in Figure 18 of Frölich would not provide a teaching of a bearing assembly that permits biaxial motion relative to two substrates.”

Applicant’s categorizing the element of Figure 18 as a cardboard box is inconsistent with Frölich, as Frölich does teach that the material may be of plastic as well as other materials, and that the structure is not limited to a box. Moreover, as an anticipation rejection, the intended use of the device is of little import, as all the structure claimed is found in the reference.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
